One of the most important aspects of the requisition process is adding the account codes. You can add accounting information to the header or to individual line items. Accounting entered at the header level will apply to all items in the order. Entering accounting information by line item allows you to code each item individually. You can have both header level and line item accounting on one document. If both exist on the document, the line item accounting will override the header accounting information.

**Header Level Account Codes (Profile Values)**

The TechBuy User Profile document walks through the steps to add FOP information into your profile. This document walks through selecting the FOAP elements from the values previously added to your profile.

There are three ways to add accounting codes at the header level: 1) Select **Required: Account** in the blue message boxes found to the right; 2) select **Required field** in the Line and Header FOAP Summary section; or 3) select **Edit** in the top right of the Line and Header FOAP Summary section.

If you marked specific FOAP values as defaults in your profile, they should automatically populate. If you do not have a default value or need to change the current value, click **Search** and select the appropriate value.
The new value will now populate in the field. Follow the same process to change any additional FOP elements necessary to create a valid budgeted FOP.

**Note:** The FOP elements must be a valid budgeted combination or the order will fail.

The TechBuy User Profile document recommends not adding a default account code in your profile. The account code is determined by the item(s) purchased.

Click the **Magnifying Glass** link under the Account field.

The Custom Field Search window will open. If you know the appropriate account number, type the **account code** in the Value field and select **Filter**.

**Note:** It is important to search for the value instead of typing it into the Account field directly. Typing it into the Account field directly can result in order failures.

If you do not know the account number, you can search utilizing the Description search field.
A list of all values meeting your search criteria will populate. Click + to the right of the appropriate value.
The value will now populate in the Account field. Select **Save Changes**.

**Header Level Account Codes (All Values)**

This section will walk through adding accounting information to a cart if you have not entered the accounting information in your profile.

**Note:** We recommend reviewing the TechBuy User Profile document and adding the accounting information to your profile for more efficient processing.

To add an account code at the header level: 1) Select **Required: Account** in the message boxes found on the right of the navigation icons; 2) select **Required field** in the Line and Header FOAP Summary section; or 3) select **Edit** in the top right of the Line and Header FOAP Summary section.

![Image of the Line and Header FOAP Summary]

The Funding Information window will open. You must select a **Chart Code** from the list of values before you can enter any additional values.

**Note:** It is important to search for values instead of typing into the field directly. Typing a value into the field directly can result in order failures.

Click the **blue arrow** to the right of Chart field.
A drop-down box will list the four available Chart codes. Select the **appropriate code** from the list.

Select the **blue arrow** to the right of the Fund field and click **Search**.

The Custom Field Search window will open. Enter your **Fund** into the Value search criteria field and select **Filter**.
**Note:** Authority must be granted from the Fund Manager before you can purchase against a fund.

The Fund code should populate beneath the search window. Click + next to the description.
The Fund code is now listed on the Funding Information window. Follow the same steps to add your Organization and your Program code.

**Note:** The FOP elements must be a valid budgeted combination or the order will fail.

The account code assigned should be determined by the item(s) purchased. Click the **Magnifying Glass** to the right of the Account field.

The Custom Field Search window will open. If you know the appropriate account number, enter the **account code** in the Value field and select **Filter**.

**Note:** It is important to search for the value instead of typing it into the field directly. Typing it into the field directly can result in order failures.

If you do not know the account number, you can search utilizing the Description search field.
A list of all values meeting your search criteria will populate. Click + to the right of the appropriate value.

The value will now populate in the Account field. If your FOAP information is populated correctly, select Save Changes.
The header level FOAP account code is now populated in the requisition form and the errors are removed.

**Line Item Account Codes**

When you purchase items that need to charge different FOPs or the items should have different Account codes, you will need to apply line item accounting. Line item accounting also allows you to add multiple FOPs per item (split accounting).

To apply line item account codes, select **Edit** \(\rightarrow\) from the upper right-hand corner of the Line and Header FOAP Summary section.

The Line and Header FOAP Summary screen will open. Any header level FOAP elements will display above the Supplier/Line Item Details section.

Each item listed in the cart will display Funding Information (same as header). If you need to assign a different FOAP to a specific line item, select the **Actions*** menu to view tasks for the selected line item.
Select **Funding Information** from the drop-down menu.

The current header information should populate for each value. To change the current value, click the blue arrow and then select the appropriate value.

Verify all elements of the FOP create a valid budgeted FOP, and make any necessary changes by following the same process.

**Note:** The FOP elements must be a valid budgeted combination or the order will fail. The account code should be driven by the item(s) purchased so you may find it necessary to change the account code by item.

Click the **Magnifying Glass** to the right of the Account field.

The Custom Field Search window will open. If you know the appropriate account number, type the account code in the Value field and select **Filter.**
**Note:** It is important to search for the value instead of typing it into the field directly. Typing it into the field directly can result in order failures.

If you do not know the account number, you can search utilizing the Description search field.

A list of all values meeting your search criteria will populate. Click + to the right of the appropriate value.
The value will now populate in the Account field. If your FOAP information is populated correctly, select **Save**.

The new accounting information will be copied to the line item.

The item will provide the message: “Funding Information - values have been overridden for this line.” You may add the same account information to other line items by selecting **copy line 1 funding information to other lines**. This will bring up the Funding Information window.

Click the **box** next to the line you want to change and select **Copy**.
